30 Sep 2025

# Logistics

- ▶ Quiz 2 Today
- ▶ PSET 3 released, due Oct 7
- ▶ Course project in discussion section tomorrow

## Quiz 2

# Arc of the course

We began by asking causal questions

- ▶ Defining counterfactuals

Then we discussed causal assumptions

- ▶ Exchangeability and experiments
- ▶ Consistency and positivity
- ▶ Directed Acyclic Graphs

# Arc of the course

We began by asking causal questions

- ▶ Defining counterfactuals

Then we discussed causal assumptions

- ▶ Exchangeability and experiments
- ▶ Consistency and positivity
- ▶ Directed Acyclic Graphs

5 weeks

# Arc of the course

# Learning goals for today

At the end of class, you will be able to

- ▶ explain the curse of dimensionality
- ▶ recognize the possible futility of nonparametric estimation

# Motivating a research question<sup>1</sup>

Income inequality across households depends on

1. inequality across individuals
2. how individuals pool into households

A college degree affects (1) and (2)

---

<sup>1</sup>[Mare 1991](#), [Schwartz 2013](#)

## Research question

To what degree does finishing college increase the probability of having a spouse who finished college?

# Research question

To what degree does finishing college increase the probability of having a spouse who finished college?

**Data.** National Longitudinal Survey of Youth 1997

- ▶ Probability sample of U.S. non-institutional civilian youth age 12–16 on Dec 31 1996
- ▶ Surveyed annually 1997–2011, then biennially
- ▶  $n = 8,984$

## Research question

To what degree does finishing college increase the probability of having a spouse who finished college?

# Research question

To what degree does finishing college increase the probability of having a spouse who finished college?

- ▶ Treatment  $A$ : Finished BA by age 25
- ▶ Outcome  $Y$ : Spouse or partner at age 30–40 holds a BA
  - ▶ 0 if no spouse or partner, or partner with no BA
  - ▶ 1 if spouse or partner holds a BA

# Research question

To what degree does finishing college increase the probability of having a spouse who finished college?

- ▶ Treatment  $A$ : Finished BA by age 25
- ▶ Outcome  $Y$ : Spouse or partner at age 30–40 holds a BA
  - ▶ 0 if no spouse or partner, or partner with no BA
  - ▶ 1 if spouse or partner holds a BA

# Research question

To what degree does finishing college increase the probability of having a spouse who finished college?

- ▶ Treatment  $A$ : Finished BA by age 25
- ▶ Outcome  $Y$ : Spouse or partner at age 30–40 holds a BA
  - ▶ 0 if no spouse or partner, or partner with no BA
  - ▶ 1 if spouse or partner holds a BA

Adjustment procedure

- 1) Estimate within subgroups defined by  $\{\text{sex}\}$
- 2) Aggregate over the subgroups

# Data

```
d %>%  
  select(sex, a, y) %>%  
  print(n = 8)
```

```
# A tibble: 7,771 x 3  
  sex      a      y  
  <chr> <chr>   <lgl>  
1 Female college FALSE  
2 Male   no_college FALSE  
3 Female no_college FALSE  
4 Male   no_college TRUE  
5 Female no_college FALSE  
6 Male   no_college FALSE  
7 Female college FALSE  
8 Male   college TRUE  
# i 7,763 more rows
```

# 1) Estimate in subgroups

```
ybar_in_subgroups <- d %>%  
  # Group by confounders and treatment  
  group_by(sex, a) %>%  
  # Summarize mean outcomes and nber of cases  
  summarize(ybar = mean(y),  
            n = n(),  
            .groups = "drop") %>%  
  print()
```

# A tibble: 4 x 4

	sex	a	ybar	n
	<chr>	<chr>	<dbl>	<int>
1	Female	college	0.467	896
2	Female	no_college	0.102	2953
3	Male	college	0.614	637
4	Male	no_college	0.174	3285

# 1) Estimate in subgroups

```
# A tibble: 4 x 4
